Platform Progress, Wallet & Billing, AI Copilot & CRM Sync Report

1. Cleaner Dashboard & Settings

- **Simplified the Main Dashboard:** Removed extra buttons (*"More Tools"*, *"All Tools"*, and *"View All"*) to make the dashboard cleaner and easier to use.
- **Simplified Business Settings:** Removed the brand color picker, regional settings, logo upload section, and the extra *Tools* tab.
- **Focused Integrations with Setup Guides:** Kept only the 4 essential integrations (**Facebook & Instagram**, **WhatsApp Business**, **Gmail**, and **Google Calendar**) and added a clear step-by-step guide showing how to connect each one.

2. Reorganized Payment Methods & Stripe Setup

- **New 3-Step Layout** across User, Admin, and Super Admin dashboards:
  - **1. Active Methods:** Shows all currently active payment methods at the very top.
  - **2. Online Payment Gateways:** Activated **Stripe** with a full connection setup, and marked **Paddle**, **Fawry / Kashier**, and **Paymob** as *Coming Soon*.
  - **3. Manual Transfer Methods:** Shows local wallets and bank transfers (like Vodafone Cash, InstaPay, and Bank Transfer) at the bottom.

3. New Wallet, Billing & Invoices System

- **Wallet Balance in the Top Bar:** Users and Admins can now see their live **Wallet Balance** at the top of the screen right next to their **Credits**.
- **Flexible Wallet Top-Up:** Combined wallet and usage history into one **Wallet** tab, and allowed users to type in **any custom amount** they want to add (not just fixed preset numbers).
- **Two Ways to Pay:** For any plan upgrade, renewal, or service, users can now choose to either **Pay from Wallet** (instant) or **Pay Now** (direct payment / receipt upload).
- **Auto-Renewal & Auto-Recharge:** Added simple switches to automatically renew subscriptions or recharge credits from the wallet when balances run low.
- **Professional Invoices Tab:** Added a new **Invoices** tab where users and admins can search, filter, preview, and download PDF invoices—automatically branded with their provider's logo and business name.
- **Better Readability:** Fixed the *Current Plan* badge colors so the text is always clear and easy to read.

4. AI Copilot Thinking Level

- **Choose AI Thinking Depth:** Added an easy selector (**Low**, **Medium**, **High**) inside AI Copilot so users can choose how deeply the AI thinks before answering.

5. Automatic Sync Between Products & CRM Leads

- **Purchases Appear Automatically in CRM:** Whenever someone buys a product, they are automatically added to **CRM & Leads** (in the *Closed* stage) and **Contacts** with their purchase amount and details.
- **Clear `Services` Source & Product Type:**
  - Changed the lead source label from *Checkout* to `Services` so it matches the **Services** filter in the CRM.
  - Added a clear badge on the customer's card showing whether they bought a `Course`, `Digital Product`, or `Service`, right next to the product's name.

6. Standard English Numbers & Currency Symbols Everywhere

- **No More Translated Numbers or Currencies:** Fixed the Arabic language view so all numbers (`0-9`) and currency codes (`EGP` , `USD` , `SAR` , `AED` , etc.) always stay in standard English format across all dashboards, charts, and checkout pages.

Joe Academy Community & Upclick Launch Brand Report

First : Joe Academy Project

Academy Community Management

- **Expanded Permissions:** Trainers and sales can manage groups, posts, members, comments, and reports (private messages remain admin-only).
- **Admin Member Controls:** Add, suspend (read-only), restore, or batch-add students with prior posts.
- **Member Counts:** Displays group-specific counts, while total community count dedupes students.
- **Interaction Control:** Admins can turn off comments/reactions globally per group; post authors can toggle for their own posts if allowed.
- **Review Dashboard:** Unified screen to preview reported posts/comments, approve/reject, with pagination up to 50 items and bulk actions.
- **Group Customization:** Supports custom/preset icons, target audience set to "Everyone," and interface simplified by removing Activity Log tab.

Student Experience & Accounts

- **Navigation:** Sticky group list, search, and filters (including saved posts filter); responsive mobile search.
- **Media & Messages:** Full post image preview, independent comment scrolling, pre-send image review with upload status/retry option.
- **Messaging Improvements:** Distinct incoming/outgoing message layouts, timestamps, auto-loading history, attachment retry, and admin inbox with conversation status/assignees.
- **Account Activation:** Capability to copy activation links from the student list for pending accounts (including older ones).
- **Simplified Menu:** Removed the "Contract" link from the sidebar (accessible via direct link only).

Launch Brand (Joe Academy)

- **Post-Launch Access:** Direct navigation to dashboard via "Enter the Platform" button; existing users are automatically redirected to dashboard.
- **Pre-Launch Preview:** Updated display of project name, logo, and colors across site/dashboard; fixed mobile/desktop previews and enhanced "Back to Workspace" visibility.
- **Settings & UX:** Moved "AI Hub" and "Business Discovery" settings to system settings (admin-only); improved loading screen feedback and retry prompt on delay.

Second : Upclick Project

Platform Launch & Customer Experience

- **Direct Access:** "Enter the Platform" button added to launch screen for immediate dashboard access.
- **Streamlined Flow:** Returning launched clients are auto-redirected to the dashboard, skipping setup steps.
- **Identity Preview:** Visual preview of project name, logo, and colors improved on mobile, desktop, and launch screen thumbnails.
- **Navigation:** Enhanced "Back to Workspace" button clarity within dashboard preview for easier setup navigation.
- **Permissions:** Moved "AI Hub" and "Business Discovery" settings to a dedicated Launch Brand section in system settings for main admins.
- **Loading UX:** Persistent loading screen with error details and a retry option for longer wait times.

AI Follow-Up — Guided Knowledge Lifecycle & Channel Network Report

1. Guided 5-Step Knowledge Lifecycle (`UPLOAD` → `TRAIN` → `TEST` → `CONNECT` → `LIVE`)

- **Step 1 — Upload:** Users can add knowledge to their AI Assistant by uploading files (PDF, DOCX, TXT, CSV), adding website links (URLs), writing custom text/FAQs, or adding AI behavior instructions, organized by categories.
- **Step 2 — Train:** Added a visual animated **Training Orb** that shows live training progress (`0%` to `100%`) as files and website links are processed and learned by the AI.
- **Step 3 — Test:** Built an interactive **AI Playground** right inside the workflow so users can chat with their AI Assistant and test its answers using the newly trained knowledge before going live.
- **Step 4 — Connect:** Created an interactive **Channel Network hub** where users can connect and toggle customer channels (**Web Chat**, **WhatsApp**, **Messenger**, and **Instagram**) with live connection indicators (*Listening*, *Paused*, or *Connect*).
- **Step 5 — Live Monitor:** Added a **Live Status & Test Screen** where users can switch their AI Assistant **Live / Paused** with one click, monitor today's active conversations, and send live test messages across connected channels.

2. Knowledge Management & Training Modes

- **Update vs. Replace Library:** When training new materials, users can choose either to **Add to existing knowledge** (append) or **Start a fresh knowledge library** (replace).
- **Category Organization & Search:** Added category filters and a search bar so users can easily find, review, or delete specific uploaded files, links, or instructions.
- **Interactive Preview Mode:** Added a **Preview Cycle** button that lets users preview how the 5-step training, channel connection, and live monitoring experience works from start to finish.

3. Production Build & Stability Fix

- **Channel Status Data Fix:** Fixed a build issue in the Knowledge Channel Network view so that connected channel details (status, account name, and active state) load safely and reliably without any errors.
